Risk Analysis

Special Issue:
Risk of Extreme and Catastrophic Events

November 2012, 32(11)

This special issue of *Risk Analysis* addresses the risk of extreme and catastrophic events. The topic of extremes is of interest across applications, including health, environment, engineering, economics, security and defense, food and agriculture, risk communication, critical infrastructure, security, defense, disaster preparedness, and others.

The conceptual and methodological dimensions of the topic include theory, methodology, and application of the multifaceted risk of extreme and catastrophic events, uncertainty analysis, decision theory, emergent and future conditions, probabilistic models, finance and management, performance criteria, large-scale systems, expert elicitation, statistical modeling, and many others. The diverse papers of this special issue are a timely sample of the expertise of the audience and contributors of our journal.

In this issue:

Introduction to the Special Issue on the Risk of Extreme and Catastrophic Events
Yacov Y. Haimes and James H. Lambert

On "Black Swans" and "Perfect Storms": Risk Analysis and Management When Statistics Are Not Enough
Elisabeth Paté-Cornell

Strategic Preparedness for Recovery from Catastrophic Risks to Communities and Infrastructure Systems of Systems
Yacov Y. Haimes

Rare Disasters and Risk Attitudes: International Differences and Implications for Integrated Assessment Modeling
P. Ding, M. D. Gerst, A. Bernstein, R. B. Howarth, and M. E. Borsuk

Roy's Safety-First Portfolio Principle in Financial Risk Management of Disastrous Events
Mei Choi Chiu, Hoi Ying Wong, and Duan Li

Flood Protection Diversification to Reduce Probabilities of Extreme Losses
Qian Zhou, James H. Lambert, Christopher W. Karvetski, Jeffrey M. Keisler, and Igor Linkov

Improving Default Risk Prediction Using Bayesian Model Uncertainty Techniques
Reza Kazemi and Ali Mosleh

Prediction and Impact of Sea Level Rise on Properties and Infrastructure of Washington, DC
Bilal M. Ayyub, Haralamb G. Braileanu, and Naeem Qureshi

Community Resilience and Decision Theory Challenges for Catastrophic Events
Louis Anthony (Tony) Cox, Jr.

System of Systems Engineering and Risk Management of Extreme Events: Concepts and Case Study
Michele Bristow, Liping Fang, and Keith W. Hipel

Modeling Extreme Risks in Ecology
Mark Burgman, James Franklin, Keith R. Hayes, Geoffrey R. Hosack, Gareth W. Peters, and Scott A. Sisson

Risk Finance for Catastrophe Losses with Pareto-Calibrated Lévy-Stable Severities
Michael R. Powers, Thomas Y. Powers, and Siwei Gao

Risk-Informed Regulation and Safety Management of Nuclear Power Plants – On the Prevention of Severe Accidents
Risto Himanen, Ari Julin, Kalle Jänkälä, Jan-Erik Holmberg, and Reino Virolainen

Small Theories and Large Risks – Is Risk Analysis Relevant for Epistemology?
Milan M. Ćirković

About Risk Analysis:

Risk Analysis, the official journal received by all members of the SRA, provides a focal point for new developments in the theory and practice of risk analysis for researchers and practitioners from a wide range of disciplines, including behavioral, biological, decision, economic, engineering, health, physical, and social sciences. Its research and perspective articles focus on risk assessment, management, perception, and communication in the topic areas of human health, safety, and the environment.
